PROFESSIONAL SUMMARY

Full Stack Java Developer with hands-on experience in building scalable enterprise warehouse and logistics management applications using Java, Spring Boot, and MSSQL. Skilled in backend optimization, asynchronous processing, REST API development, database design, and real-time inventory workflows including storage bin allocation, put-away management, shipment processing, and warehouse automation.

Passionate about solving complex system challenges, improving application performance, and building practical operational solutions that enhance warehouse operations and logistics processes. Exploring 3D warehouse visualization, AGV movement systems, and interactive logistics tools using modern technologies.

EXPERIENCE

Tekclover Pvt Ltd

Junior Technical Consultant

Jan 2025 – Present

Chennai, India

- Developed and maintained scalable enterprise warehouse management applications using **Java, Spring Boot, and MSSQL** for high-volume inventory and logistics operations.
- Designed and implemented backend APIs, business logic, and workflow modules for inventory tracking, shipment processing, put-away management, and storage bin allocation.
- Optimized complex MSSQL queries and backend processing workflows, reducing data retrieval latency by approximately 30%.
- Worked on real-time warehouse workflows including inventory movement tracking, storage capacity handling, shipment lifecycle management, and operational automation
- Implemented asynchronous processing and backend optimization techniques for high-volume warehouse and logistics operations
- Integrated backend services and workflow modules to support operational dashboards and workflow management systems using **Spring Boot**.
- Collaborated with cross-functional teams and stakeholders to translate operational requirements into scalable technical solutions
- Participated in debugging, production issue resolution, deployment support, and enhancement implementation for enterprise-level applications
- Followed structured development practices, reusable component design, and maintainable coding standards to ensure long-term scalability

PROJECTS

Warehouse Management System (Classic WMS)

- **Tech Stack:** Java, Spring Boot, MSSQL
- Developed modules for inventory tracking, shipment workflows, storage management, and put-away operations
- Implemented storage bin allocation logic based on warehouse capacity constraints and inventory handling requirements
- Optimized asynchronous backend processing for high-volume warehouse inventory operations
- Improved API response handling and database query performance for operational workflows
- Worked on real-time warehouse process automation and operational workflow management

OVERC360 – Airport Operations & Logistics Management System

- **Tech Stack:** Java, Spring Boot, MSSQL
- [Contributed to the development and maintenance of airport operations and logistics management modules within the OVERC360 platform](#)
- [Worked on shipment processing, inventory workflows, consignment handling, storage allocation, and cargo operational tracking features](#)
- Developed and optimized REST APIs and backend business logic for real-time logistics workflows and operational processing
- Implemented database-driven solutions and MSSQL query optimizations to improve transaction handling and system performance
- Handled asynchronous processing and workflow coordination for high-volume operational activities
- Collaborated with cross-functional teams to deliver operational solutions and system enhancements using Spring Boot
- Participated in debugging, enhancement implementation, deployment support, and production issue resolution

EDUCATION

Arunai Engineering College	2024
<i>Bachelor of Engineering</i>	Tiruvannamalai, India
• CGPA: 8.5	

CERTIFICATIONS

Java Full Stack Development – Softlogic Academy
Full Stack Software Developer Professional Certificate – IBM

SKILLS

Programming Languages: Java, JavaScript, SQL
Frontend Technologies: HTML5, CSS3, Bootstrap
Backend Technologies: Spring Boot, REST API Development, Microservices Basics
Database: Microsoft SQL Server (MSSQL), MySQL
Tools & Platforms: Git, GitHub, Postman, VS Code, IntelliJ IDEA
Core Concepts: Asynchronous Processing, Warehouse Management Systems, Inventory Workflows, Backend Optimization, Database Design

LANGUAGES

English (Intermediate), Tamil (Native)
